Saad Taibi

AI-Native Software Developer

Tangier, Morocco · +212 658 458343 · saadhat10@gmail.com · saadhat.github.io

FEATURED PROJECTS

Confirmal — SaaS order & cash-on-delivery management · confirmal.com
Goalden Ball — Football trivia Android game · Published on Google Play

PROFESSIONAL SUMMARY

AI-native software developer who plans, builds, and ships complete products: a live SaaS platform, a published Android game, and further apps in development. Strengths are product ownership, architecture and data-model planning, reviewing and testing AI-generated code, debugging, and release management. Builds by directing AI coding agents; the technologies named below describe what each project was built with, not independent coding proficiency.

EXPERIENCE

Founder & AI-Native Developer — Confirmal

Social-commerce order and cash-on-delivery management SaaS · 2026

- Designed, built, and launched a web platform for social sellers covering order capture from customer conversations, delivery coordination, and cash-on-delivery tracking through settlement.
- Includes multi-store and team access, a product catalog with variants, a driver portal with PIN-confirmed delivery, analytics, and Free, Pro, and MAX subscription tiers.
- Built with React, Vite, Express, Supabase, and Cloudflare, implemented through AI-assisted development (Codex).

Founder & AI-Native Developer — Goalden Ball

Football trivia Android game · Published on Google Play · Dec 2024 – Present

- Designed the architecture, data model, feature roadmap, and deployment workflow as sole technical decision-maker, from concept through release.
- Built a football trivia game inspired by “Who Wants to Be a Millionaire”: eight difficulty tiers (Rookie to G.O.A.T.), lifelines, Icon collection, card packs, daily rewards, and multilingual support.
- Built with Flutter, Dart, Riverpod, Firebase (Firestore, Auth, Remote Config, Analytics, Crashlytics), and AdMob, implemented through AI-assisted development (Cursor, Windsurf, Claude Code).
- Maintained through multiple production updates (features, bug fixes, performance, content); managed GitHub, Figma, and Google Play Console releases.

Other Projects (AI-assisted development)

See saadhat.github.io for screenshots and details

- **Istighfar Counter** — free, ad-free Android dhikr counter with offline progress tracking and backup export. Release preparation. Built with Kotlin, Jetpack Compose, SQLite.
- **Muslim Quest OS** — local-first web/PWA companion for prayer times, daily quests, Quran progress, and dhikr. In development. Built with React, TypeScript, TanStack Start, Capacitor.
- **Stackspire** — Android stacking game with missions, collection, and ranks. In development.

Translator & Scanlation Editor

Korean/Chinese to English · 2023 – 2024

- Translated manhwa and manga chapters to English, and handled cleaning, redrawing, and typesetting in Photoshop across multiple simultaneous releases under tight deadlines.

Production Operator

Nov 2021 – Feb 2022

- Operated automated manufacturing equipment and performed precision quality inspections under strict safety standards.

SKILLS

Product & Delivery: Architecture and data-model planning · Feature roadmapping · Code review · QA testing · Debugging · Release management

AI Tools & Workflows: Codex · Cursor · Claude Code · Windsurf · ChatGPT · AI agent orchestration · Multi-model workflows

Tools & Platforms: Git · GitHub · Figma · Google Play Console · Photoshop · UI/UX design

EDUCATION

Specialized Technician Diploma — Computer Networks (Bac+2) · 2013 – 2015

Baccalaureate — Physical Sciences · 2012 – 2013

LANGUAGES

Arabic (Native) · English (Advanced – C1) · French (Intermediate)
